

# Ibiam Joshua

## Fullstack Developer

I am a highly skilled and motivated software developer with my expertise in designing, developing, and deploying robust and scalable server-side applications. I excel in creating responsive and interactive interfaces, scalable APIs, proficiently managing databases. My strong knowledge of JavaScript, HTML, CSS, React.js, Next.js, RESTful APIs, JSON enables me to build reliable and secure web applications. Additionally, I have demonstrated ability to design, develop and deploy complex software systems for various industries, such as finance, and education. Excellent communication, collaboration and problem-solving skills.

## Experience

### 2022 - 2023

Xplug Technologies | No. 70, Itire Str. Lawanson Road, Ojuelegba

#### Software Developer Intern

- Developed client applications using React, Redux, and Vanilla.js, showcasing proficiency in front-end technologies.
- Contributed significantly to the training and professional development of fellow interns, fostering a collaborative learning environment.
- Led the creation of scalable full-stack applications, utilizing React for the front end and employing Node.js, Express, and PostgreSQL for the back end.
- Demonstrated expertise in user interface design and robust server-side architecture, highlighting a comprehensive skill set in web development.

### APRIL 2022 - JANUARY 2024

ALX Software Engineering | Remote

#### Software Developer Intern

- Effectively managed and assigned tasks on a daily basis, ensuring efficient progress and timely completion of projects.
- Demonstrated consistent commitment by crafting client interfaces every week, contributing to a steady cadence of development and iterative improvement.
- Collaborated within a dynamic team environment, sharing insights and collaborating to achieve project objectives while fostering a collaborative atmosphere.

## Projects

D'Apps BlockChain - Designed and developed a fully responsive and interactive application for a startup that deals with blockchain technologies, me and my partner were in charge of transforming a ready UI/UX design into a state of the art application. The technology used was React, as well as other third party libraries too. The project helped showcase my skills as a frontend developer, and my clients were quite satisfied with the results. [Github Link](#)

Learned - Learned is an e-learning platform I worked on by myself, from the SRS (Software Requirement Specification) to the technologies used, to the designs I would be using, and the ready made code and testing. Learned is a web application meant to bridge the technology gap in Nigerian primary schools, teachers as well as Administrators, could log in to the system, and create Lessons, as well as Subjects for students, and see what teacher takes which course, Lessons can be taught from a ready made application with very easy use, as well as students can come, check out the Lesson created by Teachers or Administrators, and read up on them and provide their feedback. I created a scalable and applicable backend system with RESTFUL APIs and Node.js, an interactive interface with React.js and third party libraries, and Postgresql as the database. [Github Link](#)

## Education

2021 - Present

**B.Sc. Accounting**

University of Lagos

## Expertise

- HTML5
- CSS3
- Bootstrap
- Vanilla Javascript
- React.js
- Next.js
- Typescript
- Node.js
- Express.js
- Postgresql
- Git/Github
